

# DEATH BY ROOT CANAL

"FOR THOSE SEEKING TRUTH"

*Slow Blood Poisoning*

Carlson Bridge® Revolution Edition

Dr. Ronald S. Carlson, DDS - *Mortem*

Dr. Paul Kenyon, ND - *Premortem*

Dr. Melissa L. Yee, DAc - *Postmortem*

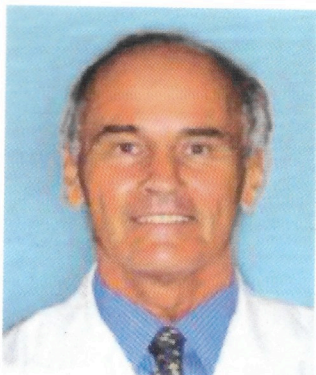

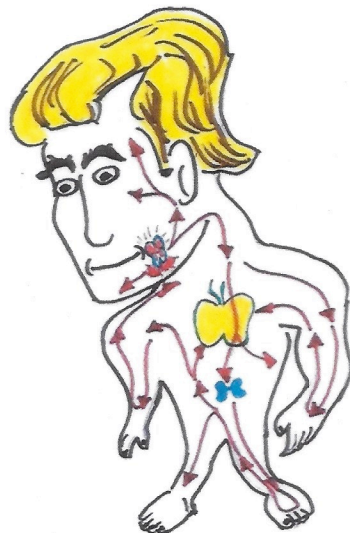

# Death by Root Canal

## *Slow Blood Poisoning*

While root canal therapy is often claimed to "save" teeth, in reality, there is nothing to save. A root canaled tooth is a dead tooth, and, as such, urges long-time dentist Dr. Carlson, should be buried six feet below Earth's surface.

"It is time to make connections", says Dr. Carlson. "The 'cult of dental death' has ruled far too long with great skill in scientific obfuscation. The dental profession is the only health field that advocates leaving dead, infected tissue within the living human body. That is what root canal treatment does."

*Death by Root Canal* challenges dental morticians – endodontists – and their sympathizers to prove that their practice of root canal therapy is NOT a hazard endangering the public's good health. Rather, it is the start of slow blood poisoning.

Dr. Ronald S. Carlson graduated from the University of Michigan School of Dentistry in 1969 and completed Post Graduate training in pediatric dentistry with Strong-Carter Dental Clinic, Honolulu, Hawaii, 1970 - 71. He is a founder of Kokua Kalihi Valley Dental Clinic in 1973 and volunteered from 1973 to 1980, serving low-income families and immigrant populations from the South Pacific Islands and Asia. He has maintained a private practice in Honolulu since 1971, emphasizing Bio-Logical Dentistry with the **CARLSON BIO-LOGICAL BRIDGE®** [carlsonbridgetech.com](http://carlsonbridgetech.com)
